

System Engineer

Fly with us into the future and become part of the team at one of the most innovative aircraft manufacturers in the world.

ENGINEERING & TRAINING SYSTEMS

TRAINING SYSTEMS

Your place of work: Stans, Switzerland

What you do:

- Oversee the application of the V model for the GBTS products as per the system engineering processes and procedures well as quality management standards
- Define and derive system requirements based on customer contracts, market needs or product lifecycle strategy
- Coordinate the technical activities required to design the architecture of the GBTS products as part of a project team
- Provide inputs to the Configuration Manager by creating the engineering bill of material and the manufacturing bill of material in line with the Configuration Manager requirements
- Liaise with project managers to provide the necessary technical inputs to the projects, e.g. status and risk reporting, scheduling, 'work completed' vs 'work planned' and 'actual' vs 'forecasted' cost deviations as per the Earned Value Management engineering approach
- Provide technical support to the Product Management team as required, e.g. bid-phase information and change reques

What you bring:

- Master degree in software engineering, aerospace engineering or computer science
- At least five years of experience in aerospace systems engineering, preferably as a lead system engineer
- Practical experience of executing system lifecycles and adhering to quality management standards
- Solid experience of tools such as DOORS, Jira, Teamcenter, Artifactory and SAP
- Advanced working knowledge of Microsoft Office
- Ability to plan and execute tasks in line with the schedule

What we offer

- Financial participation in the company's success
- Flexible working hours
- Promotion of job-related trainings
- Good social benefits

- Referral fees for successful employee placement
- Discounted meals in our staff restaurant and employee discounts
